

Empower your lab with advanced instrument familiarization. We've got your back.

Learn all about your instrument from the people who know it best

Maintaining optimal reliability and consistency is critical to getting the results you want in your lab. This requires that lab personnel have a solid, comprehensive familiarization with the instruments, products, and software that they use. That is why we are offering on-site half- and full-day courses led by experienced field service engineers (FSEs) who are certified to help your lab personnel operate and maintain their instruments with confidence and competency.

- ✓ **A standardized, comprehensive curriculum**—each course has stated learning outcomes and standardized learning materials to ensure high-quality instruction
- ✓ **In-person training**—certified FSEs go to your location to offer live, in-person training
- ✓ **Ongoing support**—all on-site training options include a full eLearning curriculum for the covered products, with 1-year access

We offer a broad array of courses covering HPLC systems (including Thermo Scientific™ Vanquish™ Core, Vanquish™ Flex, Vanquish™ Horizon, and Vanquish™ Neo instruments) and LS/MS systems (Thermo Scientific™ Orbitrap Exploris™ series, Thermo Scientific™ TSQ series, and other HRAM instruments). Choose from a half-day class without hands-on training, or full-day class with hands-on training. You can schedule half day or full day training during your annual preventive maintenance (PM) if you'd like to also receive training in maintenance of user-serviceable parts.
