## Product Specific Information

The monoclonal antibody 34.2 recognizes human lysosome-associated membrane protein 5 (LAMP5), a member of the LAMP family. LAMP5 differs from other LAMP family members in that its expression is more restricted and is referred to as brain and dendritic cell-associated LAMP-like molecule (BAD-LAMP). In humans, BAD-LAMP is expressed in post-natal neurons and non-activated plasmacytoid dendritic cells. Expression in neurons is localized to intracellular vesicles distributed in specific microdomains along neurites and may play a role in endocytosis. BAD-LAMP is localized to the endoplasmic reticulum-Golgi intermediate compartment (ERGIC) of plasmacytoid dendritic cells and is lost upon TLR activation.

This 34.2 antibody has been tested by immunohistochemistry of formalin-fixed paraffin embedded tissue using high or low pH antigen retrieval and can be used at less than or equal to 1 µg/mL. This 34.2 antibody has been tested by western blot analysis of reduced SK-N-SH cell lysates and can be used at less than or equal to 5 µg/mL. It is recommended that the antibody be carefully titrated for optimal performance in the assay of interest.

Purity: Greater than 90%, as determined by SDS-PAGE.

Aggregation: Less than 10%, as determined by HPLC.

Filtration: 0.2 µm post-manufacturing filtered.
