Product Specific Information

This antibody is predicted to react with Monkey, Cat, Pig

Recombinant rabbit monoclonal antibodies are produced using in vitro expression systems. The expression systems are developed by cloning in the specific antibody DNA sequences from immunoreactive rabbits. Then, individual clones are screened to select the best candidates for production. The advantages of using recombinant rabbit monoclonal antibodies include: better specificity and sensitivity, lot-to-lot consistency, animal origin-free formulations, and broader immunoreactivity to diverse targets due to larger rabbit immune repertoire.

CTLA-4 Antibody (702534)

Altered expression of proteins upon cell treatment demonstrates antibody specificity. Immunofluorescence analysis of CTLA-4 using CTLA-4 Antibody (11H7L17), Recombinant Rabbit Monoclonal (Product # 702534), shows increased expression of CTLA-4 in the cytoplasm of Jurkat cells upon treatment with PMA. {TM}

CTLA-4 Antibody (702534) in ICC/IF

For immunofluorescence analysis, Jurkat cells were fixed and permeabilized for detection of endogenous CTLA4 using Anti-CTLA4 Recombinant Rabbit Monoclonal Antibody (Product # 702534, 2 µg/mL) and labeled with Goat anti-Rabbit IgG (Heavy Chain) Superclonal Secondary Antibody, Alexa Fluor® 488 conjugate (Product # A27034, 1:2000). Panel a) shows representative cells that were stained for detection and localization of CTLA4 protein (green), Panel b) is stained for nuclei (blue) using SlowFade® Gold Antifade Mountant with DAPI (Product # S36938). Panel c) represents cytoskeletal F-actin staining using Rhodamine Phalloidin (Product # R415, 1:300). Panel d) is a composite image of Panels a, b and c clearly demonstrating staining in the membrane (green) in cells treated with PMA (5 ng/mL, 48hrs). Panel e) demonstrates lower signal intensity in untreated cells. Panel f) represents control cells with no primary antibody to assess background. The images were captured at 60X magnification.
