Beta Amyloid Monoclonal Antibody (10H3), Biotin

Catalog Number: MN1150B

**Details**

- **Size**: 50 µg
- **Host/Isotope**: Mouse / IgG2a, kappa
- **Class**: Monoclonal
- **Type**: Antibody
- **Clone**: 10H3
- **Immunogen**: Synthetic peptide corresponding to 28 a.a. sequence of beta amyloid
- **Conjugate**: Biotin
- **Form**: Liquid
- **Concentration**: 0.1 mg/mL
- **Storage Conditions**: 4°C

**Species Reactivity**

- **Species Reactivity**: Human
- **Published species**: Rat, Human, Mouse

**Tested Applications**

- **ELISA (ELISA)**: Assay-dependent
- **Immunohistochemistry (IHC)**: Assay-dependent
- **Western Blot (WB)**: Assay-dependent

**Published Applications**

- **ELISA (ELISA)**: See 7 publications below
- **Immunoprecipitation (IP)**: See 1 publications below
- **Blocking Assay (BLOCK)**: See 1 publications below

* Suggested working dilutions are given as a guide only. It is recommended that the user titrate the product for use in their own experiment using appropriate negative and positive controls.

**Product specific information**

MN1150B targets Beta Amyloid in ELISA, IHC, and WB applications and shows reactivity with Human samples. The MN1150B immunogen is synthetic peptide corresponding to 28 a.a. sequence of beta amyloid. MN1150B detects Beta Amyloid which has a predicted molecular weight of approximately 83 kDa.

**Background/Target Information**

Amyloid beta peptide (Abeta/Beta-amyloid) is the major constituent of amyloid plaques in the brains of individuals afflicted with Alzheimer's disease. Abeta peptide is 40-43 amino acids long and generated from the beta-amyloid precursor protein (beta APP) in a two-step process. The first step involves cleavage of the extracellular, amino-terminal domain of beta APP. Protein cleavage is performed by an aspartyl protease, beta-secretase (BACE) which is synthesized as a propeptide and must be modified to the mature and active form by the prohormone convertase, furin. Beta APP cleavage by the mature form of BACE results in the cellular secretion of a segment of beta APP, and a membrane-bound remnant. The remnant protein is processed by another protease, gamma-secretase. Gamma-secretase cleaves an intra-membrane site in the carboxyl-terminal domain of beta APP, thus generating the amyloid beta peptide. Gamma-secretase is believed to be a multi-subunit complex containing presenilin-1 and 2 as central components. The transmembrane glycoprotein, nicastrin, is associated with presenilins and has been found to bind to the carboxyl-terminus of beta APP and helps to modulate the production of the amyloid beta peptide. Abeta is an extracellular filamentous protein component of amyloid cores, neuritic plaques and is also found as a deposit in neurofibrillary tangles. Alzheimer's disease, the most common cause of senile dementia, is characterized by abnormal filamentous protein deposits in the brain. Beta amyloid deposits are also detected in Lewy body dementia, Down's syndrome, amyloidosis (Dutch type), cerebroarterial amyloidosis (cerebral amyloid angiopathy) and in the Guam Parkinson-Dementia complex.

**Thermo Fisher Scientific is not to be used for any other purpose, including without limitation, unauthorized commercial uses, in vitro diagnostic uses, ex vivo or in vivo therapeutic uses, or any type of consumption by or application to human or animals.**

**NEGLIGENCE OF OR BY BUYER, (III) USE OF THE PRODUCTS IN A MANNER FOR WHICH THEY WERE NOT DESIGNED, OR (IV) IMPROPER USE OF THE PRODUCTS.**

**IS LIMITED TO REPAIR, REPLACEMENT OF OR REFUND FOR THE NON-CONFORMING PRODUCT(S) AT SELLER'S SOLE OPTION.**

**THERE IS NO OTHER WARRANTIES, EXPRESS OR IMPLIED, ARE GRANTED INCLUDING WITHOUT LIMITATION, IMPLIED WARRANTIES OF MERCHANTABILITY, SATISFACTORY QUALITY, AND FITNESS FOR A PARTICULAR PURPOSE, OR NON INFRINGEMENT.**

**BUYER'S EXCLUSIVE REMEDY FOR NON-CONFORMING PRODUCTS DURING THE WARRANTY PERIOD IS MERELY ILLUSTRATIVE OF THE GENERAL TYPE AND QUALITY OF GOODS AND DOES NOT REPRESENT THAT ANY PRODUCT WILL CONFORM TO SUCH MODEL OR SAMPLE.**

**Products are warranted to operate or perform substantially in conformance with published Product specifications in effect at the time of sale, as set forth in the Product documentation, specifications and/or accompanying package inserts (["Documentation"]). No claim of suitability for use in applications regulated by FDA is made. The warranty provided herein is valid only when using properly trained individuals. Unless otherwise stated in the Documentation, the warranty is limited to one year from date of shipment when the Product is subjected to normal, proper and intended usage. This warranty does not extend to anyone other than the Buyer. Any model or sample furnished to Buyer is merely illustrative of the general type and quality of goods and does not represent that any Product will conform to such model or sample.**
