Product specific information

PA5-21326 targets HPA2 in IHC (P) and WB applications and shows reactivity with Human and mouse samples. The PA5-21326 immunogen is a recombinant fragment corresponding to a region within amino acids 260 and 582 of HPA2 (Uniprot ID#Q8WWQ2).

Background/Target Information

This gene encodes a heparanase enzyme. The encoded protein is a endoglycosidase that degrades heparin sulfate proteoglycans located on the extracellular matrix and cell surface. This protein may be involved in biological processes involving remodeling of the extracellular matrix including angiogenesis and tumor progression. Alternate splicing results in multiple transcript variants.
